

At Myllia Biotechnology, we use CRISPR screening approaches to investigate gene function in a variety of cellular models and to better understand disease pathogenesis for the development of novel therapeutic strategies.

We are looking for a **Lab Associate/Lab Scientist (m/f/d)** to support drug discovery projects with experience in:

- Cell biology: Mammalian cell culture (ideally experience with human primary cells), plasmid transfection, lentivirus production and cell transduction, flow cytometry.
- Molecular biology: Cloning, plasmid preparation, PCR, qRT-PCR, DNA and RNA extraction.
- Modification of cells using CRISPR/Cas9 (preferably in a screening setup)

Applicants must have a MSc degree in molecular biology or a related scientific discipline with at least 6 months of hands-on laboratory experience. As Myllia Biotechnology operates in an international environment, a good knowledge of English is essential. In addition, candidates should be able to create/edit documents, spreadsheets, and presentations using Microsoft Office tools.

If you are a team player with a passion for science please complete the questionnaire (<https://forms.office.com/e/aHdGScTYPS>) and send your application to Dr. Tilmann Buerckstuemmer (jobs@myllia.com). Applications will be considered on a rolling basis.

Disclaimer according to Austrian Law: The minimum base salary according to the collective agreement for this full-time position is EUR 2.370 per month. Remuneration will be according to experience and performance.
