

At Myllia Biotechnology, we use next-generation CRISPR screening approaches to investigate gene function in a variety of cellular models and to better understand disease pathogenesis for the development of novel therapeutic strategies.

We are currently looking for a **Lab Associate/Lab Scientist (m/f/d)** to support drug discovery projects. The position comprises the following tasks and responsibilities:

- Cell biology: Mammalian cell culture (incl. human primary cells), plasmid transfection, lentivirus production and cell transduction, flow cytometry.
- Molecular biology: Cloning, plasmid preparation, PCR, DNA and RNA extraction.
- CRISPR screening using CRISPR/Cas9 technology

Your profile:

- A Master's Degree in Molecular Biology or related scientific discipline including at least 6 months of hands-on laboratory experience
- Accurate and reliable working and documentation skills
- Agility to work on multiple projects with challenging timelines
- Ability to work independently and as part of a team
- Knowledge of Microsoft Office tools
- Adaptability to take on tasks outside one's usual responsibilities when necessary

Additionally, as Myllia Biotechnology operates in an international environment, a good knowledge of English is essential.

If you are a team player with a passion for science and would like to work in a fast-paced and dynamic environment, please send your cover letter and CV (in pdf format) to Dr. Tilmann Buerckstuemmer (jobs@myllia.com). Please don't forget to indicate whether you would need a work permit. Applications will be considered on a rolling basis.
